RIVERSIDE MARITIME TRAIL PARK
Hamlet of Riverside, Town of Southampton
Goal

To develop a natural, inviting, and safe MARITIME TRAIL PARK accessible to all ages of the community with passive recreational opportunities as well as a revitalized natural environment which respects the unique historical, cultural, and natural character of the site while promoting a more sustainable ecosystem.

“Embrace the Peconic Riverfront”

Meeting Objectives

- To review initial findings (Site Analysis)
- To solicit feedback from the community and project stakeholders
- Develop Park program elements important to the community
MEETING AGENDA
TIMEFRAME : 2 HOURS

• 7:00 - 7:45:  INTRODUCTION & REVIEW OF CONTEXT AND INITIAL FINDINGS
• 7:45 - 8:00:  QUESTIONS AND ANSWERS
• 8:00 - 8:45:  CHARETTE - GROUP DIALOG AND PROGRAM ANALYSIS
• 8:45 - 9:00:  SUMMARY AND REVIEW OF NEXT STEPS
FUNDING AND STAKEHOLDERS

- Funded by the New York Department of Environmental Conservation (NYDEC), Environmental Justice and Community Impact Grant Program
- Grant awarded to the Flanders, Riverside and Northampton Community Association, Inc. (FRNCA)
- Town of Southampton (TOS) is subcontractor to FRNCA
- Araiys Design Landscape Architecture is the Design Consultant
“The park will provide a linkage between a new downtown Riverside and the River and as such will facilitate the re-orientation of land use and community life toward the River”

- **Riverside Revitalization Action Plan (RRAP) and the Riverside Brownfield Opportunity Area (BOA)** Plan adopted by the Town Board in December 2015 to promote the environment and socially responsible redevelopment of the Hamlet of Riverside
- Engage community of Riverside with Crowdsourced, Place Making Approach
- Overwhelming expression for the provision of **public access to the River**
1 Project Background

1.2 Site Context

- 14 acres of vacant and unimproved County parkland located within the Peconic Estuary and Peconic River Watershed
- Centrally located within the Riverside Overlay District (ROD)
- Cornerstone feature of the Riverside Revitalization Plan (RRAP)
- Easily accessible from Hamlet Center and surrounding Hamlet Neighborhood
- Key feature and destination on the planned 1.6 mile pedestrian walkway
- Acquired by Suffolk County in 2007 with funds from the New Suffolk County Drinking Water Protection Program and preserved for passive recreational use
- Town of Southampton (TOS) negotiated an Inter-Municipal Agreement (IMA) with county that grants lease to improve and maintain the land for the benefit of the residents of Suffolk County
Riverside Maritime Trail Park is located on the Lower Peconic River
Includes reach and tributaries from Peconic Avenue east to the mouth of the river
- 6 contiguous tax parcels
- 2,200 linear feet of river frontage
- 1.3 acres of tidal and freshwater wetlands
- Tidal and freshwater wetlands
- Dredging of River and Nutrient laden fill for development
- Adverse impact on water quality
- Reclamation opportunities

1.3 Environmental Context

- Water Type: Estuary Waters
- Class SC - suitable for general recreational use and support of aquatic life, but not as shellfishing water or public bathing
- Recreational uses are also known to be stressed by nutrients, algal blooms, and pathogens
- Type of Pollutants:
  - Known: Low D.O./Oxygen Demand, Nutrients (nitrogen), Algal plant growth (brown tide, rust tide)
  - Suspected: Urban Storm Runoff, On Site / Septic Systems, Municipal Discharges (Riverhead STP), Other sources (Waterfowl)

Watershed awareness promotes an expanded sense of community and stewardship of precious resources
The proposed park is situated between the Peconic Estuary and the Central Pine Barrens Area. Two unique ecosystems with a rich diversity of plant and animal life.

Natural History - Land shaped by Glaciers

- The Peconic River watershed was formed by stream erosion and retreat of the Wisconsin glacier approximately 21,000 years ago.
- The glacier left two prominent end moraines that separate to form the Peconic Estuary.

Central Pine Barrens

- Occupying the central and eastern end of Long Island.
- Contains more than 900 square miles of terrestrial and aquatic environments.
- The Peconic River headwaters and tributaries located within the Central Pine Barrens.
The Peconic Estuary - one of the “last great places in the Western Hemisphere.” -The Nature Conservancy

An estuary is a grouping of bays, sounds, harbors, and other semi-enclosed coastal waters that are connected to the sea and where fresh water from rivers, streams, creeks, or ground water mixes with salt water. They provide critical habitat for numerous birds, mammals, fish, shellfish, & other wildlife. They provide nursery & spawning areas for many marine organisms including commercially and recreationally important fish and shellfish. And they are natural buffers that filter sediment and nutrients out of water draining from land, absorb flood waters, and dissipate waves during storms protecting human property.

(Bortman & Niedowski, Characterization of The Living Resources of the Peconic Estuary, 1998)

- “Estuary of National Significance” - U.S. EPA in 1992
- One of 28 estuaries in the National Estuary Program (NEP)
- Includes the Peconic River and the land areas that contribute groundwater and stormwater runoff to the Estuary
- Reach from headwaters of the Peconic River west of the William Floyd Parkway to the tips of the north and south forks
- The Peconic Estuary Program (PEP) is responsible for creating and implementing a comprehensive management plan to protect the estuary
- For more information please visit www.peconicestuary

PEP Initiatives for the western estuary include:
- Adoption of a nitrogen guideline and a point source nitrogen freeze for the western estuary
- Development of a Nitrogen Total Maximum Daily Load (TMDL) for selected water bodies
- “Living Shoreline” restoration projects
2 Site Analysis & Assessment

2.2 Site Aerials
Site Analysis & Assessment

ARAIYS DESIGN DATE: 09/10/18

2.2 Site Aerials

Egrets
Heron
Osprey
Osprey Nest
Eastern Box Turtle
Cormorant
2 Site Analysis & Assessment

2.3 Shoreline Analysis
2 Site Analysis & Assessment

2.4 Soil Analysis

Soil Description:

Fd - Fill land, dredged material
Fd is made up of areas that have been filled with material from hydraulic or mechanical dredging operations. Drought, low fertility, and high salt content severely limit the establishment of lawns and other landscape plantings.

At - Atsion sand
At is somewhat poorly drained to poorly drained soil is near ponds and creeks and along the bottoms of deeply cut meltwater channels. This soil has a high water table, and drained areas have very low available moisture capacity. Scarcity of good outlets makes this soil difficult drain. The soil is better suited to woodland.

CuB - Cut and fill land, gently sloping
This unit is made up of level to gently sloping areas that have been cut and filled for nonfarm uses. Texture is dominantly loamy fine sand or coarser textured material throughout.

Ur - Urban land
Urban land consist of areas that are more than 80% covered by buildings and pavements. Examination and identification of the soils in these areas are impractical.
2 Site Analysis & Assessment

2.5 Vegetative Analysis

NOTES:
THIS PLAN HAS BEEN PREPARED FROM A SURVEY PREPARED BY YOUNG & YOUNG PLANNING, ENGINEERING, LAND SURVEYING & ARCHITECTURE - RIVERHEAD N.Y. & SOIL TEST HOLE DATA PREPARED BY: (enter company and date of soil test, etc.)

THIS PLAN HAS BEEN PREPARED FOR SITE PLAN APPROVAL ONLY. THIS PLAN IS NOT TO BE USED FOR CONSTRUCTION PURPOSES.

AREA = 14.000 ACRES
OWNER: TOWN OF SOUTHAMPTON
ZONE: RPL (RO-7) - RIVERSIDE PARKLAND

PROGRAM DEVELOPMENT

- *The program is the list of desired elements, features, and uses for the park.*
- *It will evolve from the site inventory and analysis phase, community input & feedback, and the community health survey*
3 Program Development

3.1 Objectives

Maritime trail park with passive recreation
Create natural trails, public access to the river

Environmental revitalization
Restore natural wetland system with wetland buffer and native plantings
3 Program Development

3.2 Precedent Project

Avalon Park Preserve
Stony Brook, NY

- Located in Stony Brook Harbor on Mill Pond
- Park provides walking trails, wildlife observation, community events
- 8 acre park once a residential site abandoned sometime in the early 1900's
- Years of neglect allowed non-native species of vines and shrubs to invade and dominate the landscape choking out large trees
- Park design concept was to create a series of woodland gardens and paths celebrating native flora of Long Island
- Park programming includes walking paths, wildlife observation overlooks, labyrinth, trails
- Community events include stargazing, nature programming, stewardship projects, yoga and meditation
Lower Susquehanna Heritage Greenway Trail is a 4.8 mile moderately trafficked out and back trail located near Havre de Grace, Maryland that features a river and is rated as moderate. The trail offers a number of activity options and is accessible year-round.

Havre de Grace, Maryland
Lower Susquehanna Heritage Greenway Trail
Shoreline restoration component of park includes:

- Wetland restoration within 75 feet of the shoreline with an additional 25 foot buffer
- Removal of dredge spoil within 75 feet of the shoreline
- Removal of non-indigenous plants within 75 feet of the shoreline
- Baseline natural resources and plant inventory
- Long term vegetation management plan
- Removal and control of invasive vegetation in upland areas
- Environmental remediation in upland areas
- Enhancement of public access and vistas to the River
- Conservation and management measures aimed at restoring water quality

Current restoration efforts within the Peconic Estuary provide solid precedent for scientifically sound, local best management practices

1. Peconic Land Trust's Widows Hole Preserve Proposed Shoreline Restoration Plan
2. Shinnecock Coastal Resiliency and Habitat Restoration Project

Both projects utilizing “Living Shoreline” methods for invasive plant removal and shoreline and wetland restoration to be considered for the Riverside Maritime Park
Living Shorelines

Shoreline techniques that incorporate natural living features alone or in combination with structural components such as rock, wood, fiber rolls, bagged shell, and concrete shellfish substrate.

Benefits

- Control or reduce shoreline erosion while maintaining benefits comparable to the natural shoreline such as allowing for natural sediment movement;
- Use the minimum amount of structural components necessary for hybrid techniques to obtain project goals;
- Improve, restore, or maintain the connection between the upland and water habitats; Incorporate habitat enhancement and natural elements ex: native revegetation, establishment of new vegetation.

Example of Living Shoreline technique for eroded shoreline.
Peconic Land Trust’s Widows Hole Preserve
Proposed Shoreline Restoration Plan

Project Overview:
- Located at the former Greenport Terminal
- Includes 0.4 acres of shoreline and adjacent upland
- Goal is to increase the resiliency of the shoreline to erosion and the overall habitat value and aesthetics of the property

Shoreline Restoration
- Degraded shoreline due to historic use
- Restoration plan will rebuild the shore with clean sand fill to allow for the planting of smooth cordgrass (Spartina alterniflora)
- Spartina is an intertidal plant that spends approximately half of each day immersed in salt water and ranges from mean sea level (MSL) to mean high water (MHW).
- The MSL became the bottom boundary of the spartina planting
- Addition of fill will restore this section of shoreline to a grade comparable to pre-commercial use of the site
- Result in a wider intertidal area which will allow for the natural expansion of cordgrass and expanded forage area for shore birds
Shinnecock Coastal Resiliency and Habitat Restoration Project

3.3 Pilot Projects within the Peconic Estuary

Project Goals:

- Beach nourishment and restoration
- Nourish American Oyster Habitat
- Eelgrass meadow restoration
- Salt marsh plantings
- Restore upland plant community
- Restore tidal flow to existing marshes

- 3,000 Linear Feet of shoreline restoration heavily impacted by super storm Sandy
- Restore a natural resilience and ecological diversity
- Increase in the carrying capacity of the local waters for important species of fish and wildlife and there will be greater protection of the reservation through wave attenuation and sediment trapping
- Tidal flushing in two wetland systems that are being invaded by Phragmites and serving as sources of significant nuisance mosquito populations
- Increasing the tidal flow of these marshes there will be an improvement in the ecological carrying capacity, an increase in species diversity, and will reduce, if not eliminate, a significant mosquito issue.

Community Participatory Public Health Survey

- Population based household survey of 500 consenting residents aged 18 years and above
- Findings will guide and inform the preparation of the plan for the park

Park Elements to be considered in Survey:
- Wooden platform/Catwalk (not bulk headed) (wheelchair and stroller friendly)
- Walking trail (paths in the woods)
- Displays about waterfront ecosystem and history of the river
- Fishing platform
- Picnic tables and benches
- Kayak/canoe launch
- Group fitness classes (Zumba, karate)
- Outdoor yoga and meditation
- Open Green space
- Fitness Trail (guided circuit of exercises)
- Comfort/rest station
- Organized wildlife watching (birds, butterflies, other wildlife) and interpretive education
- Displays and information accessible to people with cognitive, visual and hearing impairments
- Social Media/Meet Up Group Activities
- Game tables (chess, checkers, backgammon)
- Children's trail (nature education, music, sensory experiences)
- Coin operated binoculars for viewing
- Fenced-in dog park
- Bike path
- Wildlife conservation efforts
3 Program Development

3.4 Program Opportunities

Walking trails
Displays and information accessible to people with cognitive, visual and hearing impairments / Handicapped accessible trails
3 Program Development

3.4 Program Opportunities

At grade/ Elevated boardwalk
Fitness trail
3 Program Development

3.4 Program Opportunities

Bike path
Children’s trail, sensory experiences
Water platform, overlooks, fishing platform
3 Program Development

3.4 Program Opportunities

Kayak launch area
Open green space, meet up group activities
Organized wildlife education / Wildlife observation
Habitat gardens
Community gardens
3.4 Program Opportunities

Group fitness
Fenced-in dog space
Art displays
Rest stations, park amenities (picnic tables, wood benches, kiosks)
Game Tables (chess, checkers, backgammon)
Safety features: lighting & railing
Educational displays
On site parking
Rain gardens, bioswale, native planting, permeable paver
Thank you
