
Appendix F

**Updated Accident Analysis
Accident Occurrences
January 1, 2012 to September 15, 2016
Fifty-Five and One Half Months**

Initially, information was obtained from NYSDOT regarding all accidents that have occurred on Major's Path in the immediate vicinity of the site for three years in the original report prepared for this project in March of 2011, this data consisted of computer-generated verbal description summaries of each reportable and non-reportable accident case that occurred on the segment of Major's Path between North Sea Mecox Road on the south and Little Fresh Pond Road on the north (endpoints inclusive) between April 1, 2007 and March 31, 2010. The accident verbal descriptions obtained from NYSDOT can be found in the Appendix of the DEIS Traffic Impact Study in the section entitled, "NYSDOT Accident Verbal Descriptions".

An examination of the accident data then indicated that the accident experience along this portion of Major's Path for the study period was minimal, with a total of four (4) accidents occurring over the entire three year period, none of which involved injuries or fatalities.

Of the four accidents, two occurred in June of 2008, and two in October of 2009. None of the accidents was reported to have occurred at any of the existing access points to the Southampton Racquet Club, which was open and operating during the study period.

In the vicinity of the proposed project, one accident took place when a vehicle backed onto the roadway improperly, and a second when an inexperienced driver ran off the road in wet conditions. Of the two remaining accidents, one occurred when a vehicle operated by a driver under the influence of alcohol struck a tree, and the last was a rear end accident due to driver inattention and unsafe speed.

The previously conducted accident analysis has been updated and expanded to include Major's Path from Edge of Woods Road/Little Fresh Pond Road to North Sea Road, North Sea Road from Major's Path to North Sea-Mecox Road and North Sea-Mecox Road from North Sea Road to Major's Path. The accident records obtained included the period January 1, 2012 to September 15, 2016, fifty-five months. The accident records are attached.

There were nine accidents on Major's Path between North Sea-Mecox Road and Edge of Woods Road/Little Fresh Pond Road in the vicinity of the site during the period from January 1, 2012 to August 31, 2016. The period included four summers in which the Southampton Day Camp was operating.

It should be noted that “T” Road is the existing circular roadway within the Day Camp site that begins as a one way entrance roadway from Major’s Path, traverses the site and exits as a one way exit only roadway onto Major’s Path approximately 120 feet south of the entrance. “S” Road is a minor subdivision road that intersects Major’s Path just north of the site. The nine accidents are as follows:

- Major’s Path 93 meters (305 feet) south of T Road. (It is unknown whether the reference to T Road is to the entrance or exit). Occurred on November 27, 2013 at 11:46 A.M. The accident occurred in the rain on a curve in the road and the southbound vehicle was purported to hit curbing. Unsafe speed was noted as a contributing factor.
- Major’s Path 40 meters (131 feet) south of T Road. (It is unknown whether the reference to T Road is to the entrance or exit). Occurred on January 4, 2014 at 3:00 P.M. The accident occurred during snow/ice conditions on a curve and the southbound vehicle hit a tree off the road.
- Major’s Path 40 meters (131 feet) south of T Road. (It is unknown whether the reference to T Road is to the entrance or exit). Occurred on January 10, 2014 at 3:45 A.M. The accident occurred on a curve in the road and the southbound vehicle hit a tree off the road. Alcohol was noted as a contributing factor.
- Major’s Path, 93 meters (305 feet) south of T Road. (It is not known whether the reference to T Road is to the entrance or exit). Occurred on Saturday, July 12, 2014 at 4:58 P.M. Two vehicles, both traveling northbound were involved. The accident occurred on a curve. An apparent factor noted was “Passing or lane usage improperly”.
- Major’s Path, 40 meters (131 feet) south of T Road. (It is not known whether the reference to T Road is to the entrance or exit). Occurred on September 25, 2014 at 11:31 A.M. The accident occurred in the rain, on a curve when a southbound vehicle left the road and hit a tree.
- Major’s Path at S Road. Occurred Thursday, December 18, 2014 at 10:02 A.M. A southbound vehicle hit an animal. The accident occurred on a segment of road termed straight and narrow.
- Major’s Path, 42 meters (138 feet) south of unknown driveway. The accident occurred on Thursday, July 30, 2015 at 8:47 P.M. The accident involved a single southbound vehicle leaving the road and hitting a fixed object. The report indicated wet pavement and unsafe speed were causes.
- Major’s Path, 40 meters (130 feet) south of Road T. The accident occurred on Sunday, November 22, 2015 at 10:22 A.M. The accident involved a southbound vehicle that left

the road and hit a tree. The report noted wet slippery pavement and unsafe speed were causes.

- Major's Path, 284 meters (932 feet) south of Road T. The accident occurred on Tuesday, April 12, 2016 at 1:10 P.M. The accident involved northbound vehicle that left the road and hit a tree. The report noted wet slippery pavement.

Nine accidents as noted above were identified as having occurred on Major's Path in the vicinity of the site. One was a collision with an animal and could be considered a random occurrence with little significance. Six of the eight remaining accidents involved southbound vehicles running off the road on a curve. Wet pavement and unsafe speed was frequently cited as causes. These accidents were identified as occurring either at 305 feet south of T Road or 131 feet south of T Road. It could not be identified which intersection of T Road at Major's Path was the reference point but those two intersections are only 250 feet apart so all four accidents occurred in close proximity. This appears to be a change from the prior study period from July 1, 2007 to March 31, 2010. A twenty mile per hour curve warning sign is posted north of the area where the accidents occurred. The curve warning sign is augmented by a chevron sign just preceding of the curves. The chevron sign could be posted more affectively to be more in line with the view of motorists approaching the curve or be augmented with an additional sign further south. Improper super elevation or pavement with insufficient surface friction when wet may also be factors.

This segment of road has recently been resurfaced by the Town which should have increased skid resistance and aided vehicles in keeping on the road. Further monitoring is needed to determine whether the resurfacing has reduced the accident potential.

The final two of the nine accidents involved northbound motorists. One 932 feet south of Road T also involved wet and slippery pavement while in the other a contributing factor was noted as passing or lane usage improper. The accidents do not appear to be linked to anything other than driver error and do not indicate a pattern of accidents at the location.

None of the nine accidents are linked to activity involving the Southampton Day Camp. All occurred at time when the camp was not operating or would not be operating in the future. The Camp did operate in summers of 2013, 2014, 2015 and 2016 and none of the accidents were associated with the actual access points.

The addition of the very small estimated increase in traffic due to the proposed project should not result in any increase in accident experience at this location, and the recommended access arrangement should further enhance the safe operation of the roadway.

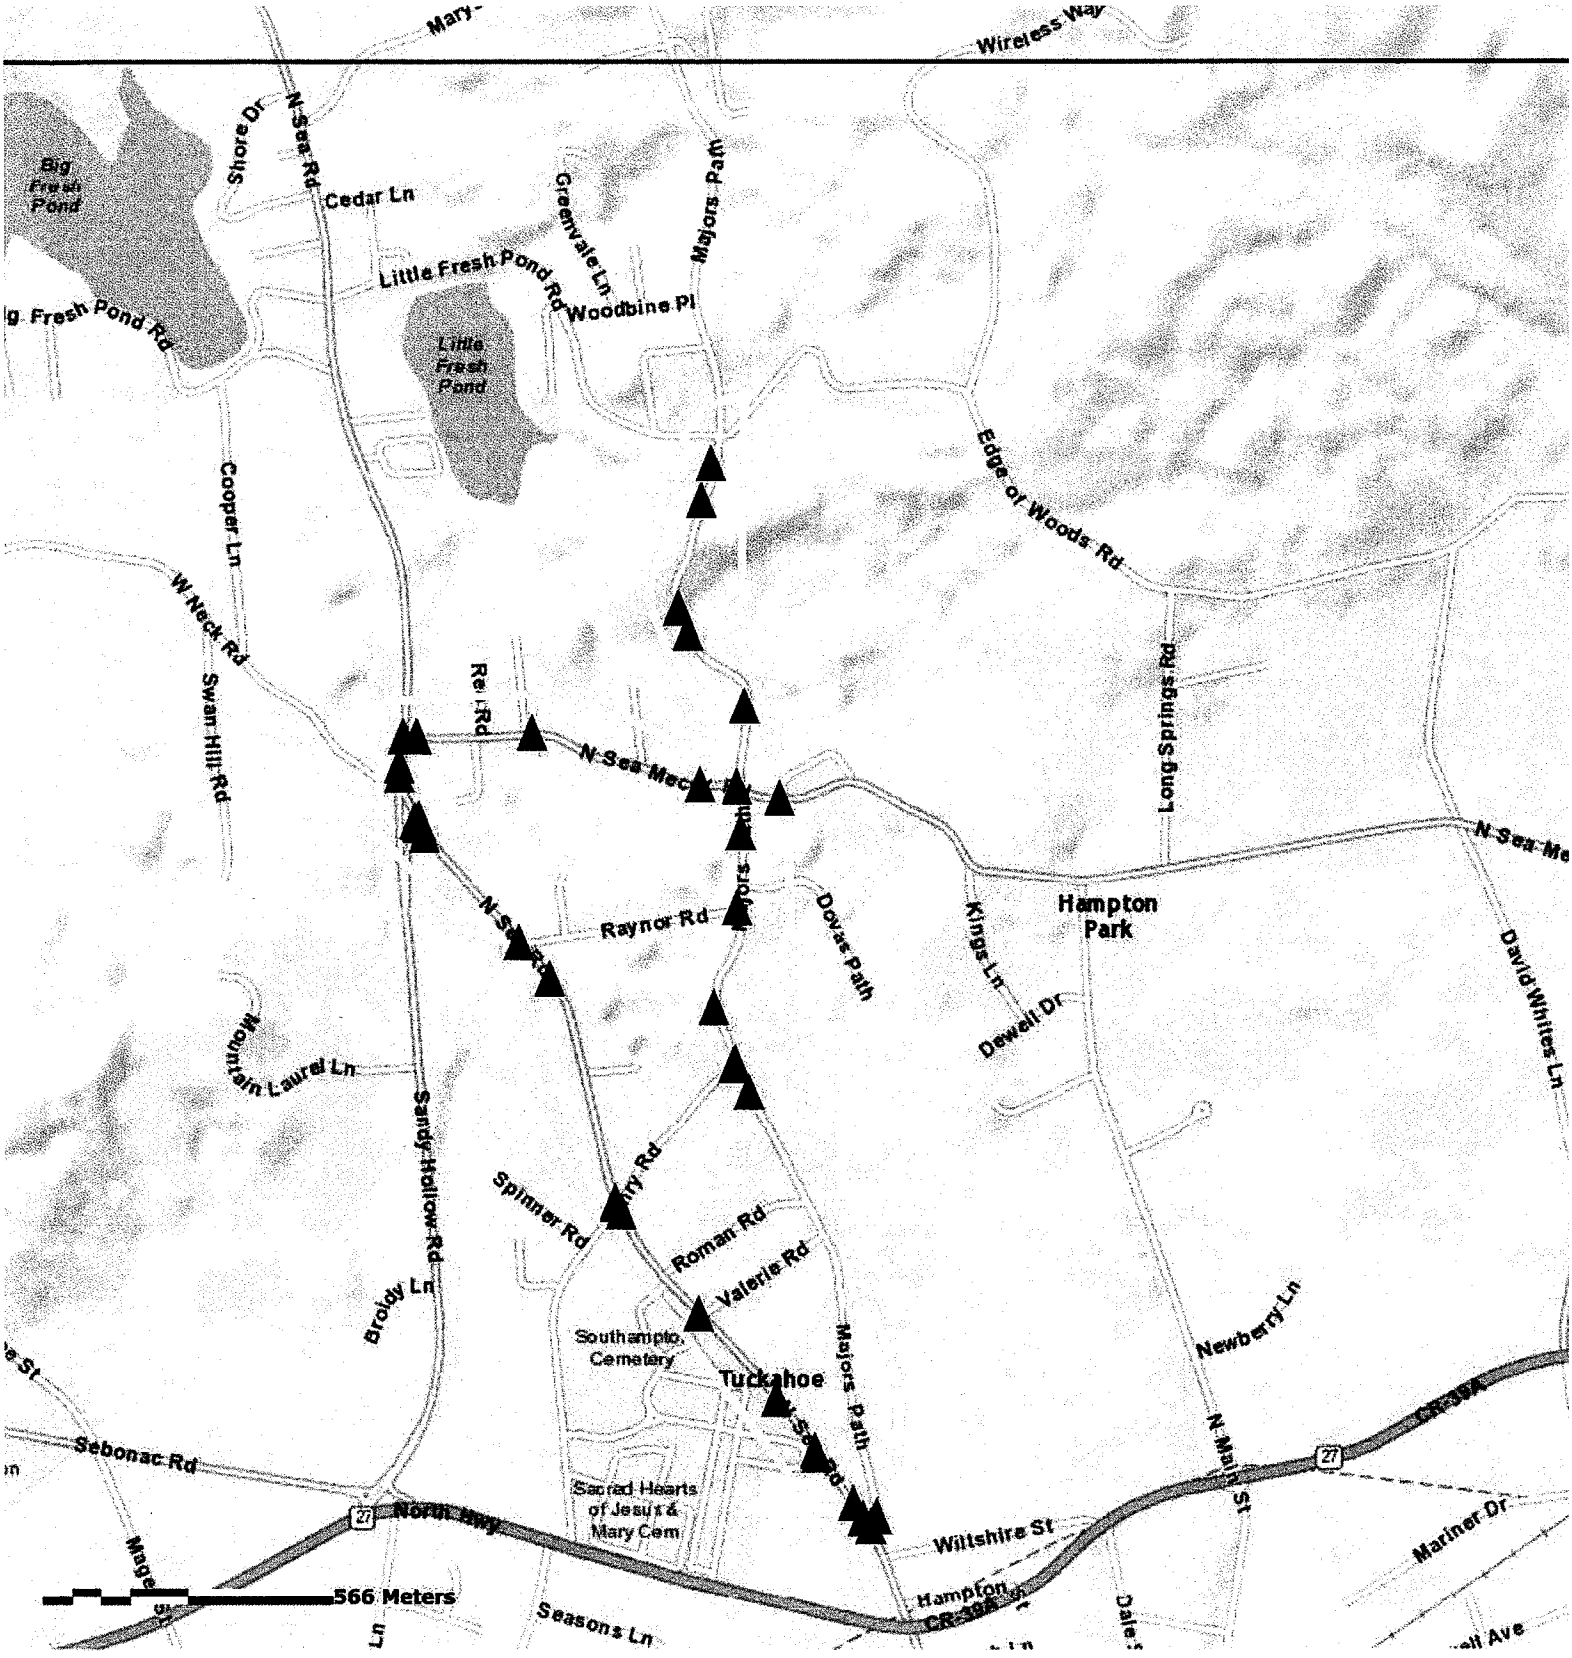

There was generally a low level of accidents found on the remaining portions of Major's Path and North Sea-Mecox Road which were included in the study.

Three accidents occurred on North Sea-Mecox Road between North Sea Road and Major's Path and one accident occurred on Major's Path between North Sea-Mecox Road and North Sea Road. One accident occurred at the intersections of Major's Path with North Sea Road, North Sea-Mecox Road and Edge of Woods Road/Little Fresh Pond Road.

A high number of accidents were found along North Sea Road between Major's Path and North Sea-Mecox Road. Eleven accidents or an average of 2.5 accidents per year were found at the intersection of North Sea Road (C.R. 38) at Sandy Hollow Road (C.R. 52) but this is a relatively low occurrence rate for a signalized intersection. Six accidents or a one and a third per year occurred at the intersection of North Sea Road at North Sea-Mecox Road, again a relatively low rate of occurrence for an intersection. A more significant concern was the segment of North Sea Road (C.R. 38) between Major's Path and Sandy Hollow Road (C.R. 52) a distance of about one mile where 21 accidents were noted. A significant portion of these accidents were clustered in the vicinity of Henry Road and to a lesser extent Valerie Road which are both unsignalized intersections. While there is some indication that this segment of roadway should be considered for some further examination in the future, it must be recognized that traffic from the Southampton Day Camp is unlikely to use this segment of roadway, and thus, will have no impact on conditions on C.R. 38 between Sandy Hollow Road and Major's Path.

In summary, the accident analysis contained in the DEIS Traffic Study has been updated with the latest available data that would include months when the day camp is operational. It included four summer seasons when the camp was operational and no accidents on Major's Path could be attributed to the camp's operation. The traffic analysis as presented in the DEIS Traffic Impact Study and the accident analysis as provided in the Traffic Impact Study, and as updated in this analysis, indicate that the proposed project will not lead to a lessening of traffic safety and that the additional traffic the project will generate can be accommodated.
